Portfolio

Experience Designer with 4+ years at Microsoft designing enterprise-scale commerce and self-serve systems. Specialise in system-level UX for complex operational workflows, AI-assisted experiences, and legacy system modernisation. Track record of reducing ordering time by ~60%, driving ~80% adoption in 30 days, and supporting multi-billion-dollar enterprise transactions. Foundation in new media design (NID) and mechanical engineering.

EXPERIENCE

Microsoft

July 2022 – Present · Maharashtra, India

UX Designer II

September 2024 – Present

- Designed a self-serve ordering experience on M365 Admin Centre that replaced manual, operations-heavy workflows — resulting in ~60% faster ordering, ~80% adoption within 30 days, 1000s of partner hours saved annually, and $Ms in cost avoidance.
- Reframed an enterprise seller dashboard from a passive reporting surface into an action-driven decision system, reducing Excel dependency and embedding trust signals throughout the experience.
- Led the design-led retirement of a mission-critical legacy order entry system supporting multi-billion-dollar transactions, applying Parity++ principles to modernise flows while carrying zero UX debt forward.
- Conducted evaluative UX research establishing a SUS baseline of 69.6, connecting usability findings to trust, velocity, and behavioural friction — shifting the team's quality bar from feature-complete to behaviour-complete.
- Served as design partner for Amazon's >$1B enterprise agreement, ensuring role segregation and security controls were UX-viable at scale. Patterns created became reusable across the platform.

Designer

July 2022 – September 2024

- Architected a scalable ordering platform across EA, Non-EA, Partner, and OSC/ROC flows. Introduced multi-PO support, bulk editing, and multi-SKU search — establishing reusable patterns adopted across 4+ order types.
- Designed a streamlined update statement workflow that cut processing time from ~10 days to ~5 minutes. Recognised by stakeholders as a top efficiency win.
- Proactively identified unrestricted edit access, missing consent flows, and zero audit trail in a production-bound feature (CICR). Escalated to leadership, resulting in a full security-first redesign before rollout.
- Inherited a delivery-blocked credits experience three weeks before GA. Simplified the flow, made hard scope trade-offs, and shipped on time. Cited by leadership as a key growth milestone.
- Designed a unified Activity Log and Audit Report providing real-time compliance traceability, replacing fragmented email-based tracking for operations and compliance teams.
- Consolidated two separate legacy credits workflows into a single experience on VL Central, reducing context-switching for operations teams and eliminating a standalone legacy tool.

Hurrey Tech Ventures

November 2020 – August 2021 · India

Design Lead

November 2020 – August 2021

- Owned the overall design track across the full product family, from strategy through execution.
- Created a new brand identity and led the products through a major UX overhaul.

Wipro Digital

January 2020 – July 2020 · Chennai, India

Design Innovation Intern

January 2020 – July 2020

- Led end-to-end design of a financial sector project aimed at gamifying the personal finance experience — from research and data interpretation through strategy, storyboarding, HCI design, and prototyping.

IFB Industries Ltd

June 2019 – January 2020 · Goa, India

Experience Design Intern

June 2019 – January 2020

- Enhanced in-store customer experience at IFB Points, including retail experience design and future store concept design.
- Contributed to the research division focusing on VR, AR, and IoT applications.

Narangi Brush

January 2016 – December 2017 · Nagpur, India

Space Designer

January 2016 – December 2017

PROJECTS

AI Copilot Promptbook — Domain Expert System

Side Project · 2024

- Designed and built a structured AI promptbook that turns Copilot into a domain expert, with 8 evidence-backed operating principles, 15 structured playbooks, and 4000+ prompts.
- Architected a reference system ensuring zero unsourced claims across 20+ published standards, demonstrating how to build trustworthy AI assistance for specialist domains.
- Created a domain-agnostic framework (principles → playbooks → prompts → references) applicable to any creative or technical domain.

Microsoft Hackathons — Innovation & Design Leadership

Microsoft · Ongoing

- Acted as design lead and cross-functional collaborator across multiple Microsoft hackathons, reframing ideas toward revenue enablement and operational efficiency.
- Built AI-native prototypes with rapid idea-to-prototype cycles, translating ambiguity into system-level, secure-by-design product concepts anchored in real enterprise commerce workflows.
- Influenced decisions without authority, elevating cross-functional output and framing outcomes for leadership clarity around revenue, scale, and cost impact.
- Recognised for leadership presence and consistently turning hackathon ideas into leadership-ready, revenue-aware solutions.

SKILLS

Enterprise UX · Systems Thinking · AI-Assisted Design · Copilot Workflows · Design Strategy · UX Research · User-Centred Design · Information Architecture · Interaction Design · Prototyping · Design Systems · Accessibility · Secure-by-Design · Responsible AI · Stakeholder Alignment · Cross-Functional Leadership · Figma

EDUCATION

National Institute of Design (NID)

Master's degree, New Media Design

2017 – 2020

Savitribai Phule Pune University

Bachelor's degree, Mechanical Engineering

2012 – 2016

HONOURS & AWARDS

Design Innovator
